Indicator 8:
Rate of Detected Malicious Threats

Under Development

Indicator 8 is currently under development and will focus on reported cyber and physical threats to the Western Interconnection. WECC currently receives notification of these threats through the EOP-004-2 and OE-417 reporting process; however, these reports may not reflect the full spectrum of the threats. Consequently, WECC does not currently have adequate data to develop an accurate indicator for physical and cyber security. WECC is working with other organizations (ex., NERC, E-ISAC) to determine potential datasets for this indicator that can provide a broader and more complete assessment.
